INFORMATION DISCLOSURE STATEMENT UNDER 37 CFR 1.97(b). AND EXPLANATION OF THE RELEVANCE OF THE CITED PRIOR ART

Sir:

The undersigned hereby requests that the prior art cited on the attached prior art statement be placed of record in the application file and be considered by the examiner.

This citation of prior art is made under 37 CFR 1.97(b), since it is being filed within three months of the filing date and before the mailing of a first Office Action.

The relevance of the prior art cited on the attached form PTO/SB/08a is as follows:

WO 96/04067

The present invention describes a device to process a fluid, the device having a membrane filter, wherein an agent able to detect or cause modification of at least one component of said fluid is localized in said device, preferably on the membrane. The device is arranged to filter the fluid by cross-flow filtration. A preferred form of membrane filter is hollow fibre membranes, especially a single hollow fibre membrane. Space between the exterior of the membrane and the inside surface of the outer casing of the device may be completely or partially filled with a solid material, which may contain the agent.

JP56147013

This invention shows how to detect the flow rate of liquid surely and periodically and obtain always a constant flow rate by measuring the time required for the intermittently fed bubbles to to pass between two sets of photodetectors provided along the flow of liquid in a fluid flow passage having a transparent part. Photodetectors 2, 3 consisting of light emitting diodes 2a, 3a and light receivers 2b, 3b such as phototransistors are disposed by leaving fixed spacings in the transparent part of a fluid passage 1. At every prescribed time, bubbles are produced in a bubble supply pipe 6 by a bubble feeder 8, and bubbles 9 are set into the passage 1 through a check valve 7b. The time required for the bubble 9 to pass between the photodetectors 2 and 3 is detected and a liquid feed pump 4 is so controlled as to correct the rate of its fluctuations. Thereby, the constant flow rate is obtained at all times.
